## Paths

### Add a new pet to the store

POST /pet

### Parameters

| Type | Name                           | Description                                    | Schema              |
|------|--------------------------------|--|---------------------|
| Body | <b>body</b><br><i>required</i> | Pet object that needs to be added to the store | <a href="#">Pet</a> |

## Responses

| HTTP Code | Description   | Schema     |
|-----------|---------------|------------|
| 405       | Invalid input | No Content |

## Consumes

- `application/json`
- `application/xml`

## Produces

- `application/xml`
- `application/json`

## Tags

- `pet`

## Security

| Type   | Name                          | Scopes               |
|--------|-------------------------------|----------------------|
| oauth2 | <a href="#">petstore_auth</a> | write:pets,read:pets |

## Example HTTP request

### Request path

```
/pet
```

### Request body

```
{
  "id" : 0,
  "category" : {
    "id" : 0,
    "name" : "string"
  },
  "name" : "doggie",
  "photoUrls" : [ "string" ],
  "tags" : [ {
    "id" : 0,
    "name" : "string"
  } ],
  "status" : "string"
}
```

## Update an existing pet

PUT /pet

### Parameters

| Type | Name                           | Description                                    | Schema              |
|------|--------------------------------|--|---------------------|
| Body | <b>body</b><br><i>required</i> | Pet object that needs to be added to the store | <a href="#">Pet</a> |

### Responses

| HTTP Code | Description          | Schema     |
|-----------|----------------------|------------|
| 400       | Invalid ID supplied  | No Content |
| 404       | Pet not found        | No Content |
| 405       | Validation exception | No Content |

### Consumes

- `application/json`
- `application/xml`

### Produces

- `application/xml`
- `application/json`

## Tags

- pet

## Security

| Type   | Name                          | Scopes               |
|--------|-------------------------------|----------------------|
| oauth2 | <a href="#">petstore_auth</a> | write:pets,read:pets |

## Example HTTP request

### Request path

```
/pet
```

### Request body

```
{
  "id" : 0,
  "category" : {
    "id" : 0,
    "name" : "string"
  },
  "name" : "doggie",
  "photoUrls" : [ "string" ],
  "tags" : [ {
    "id" : 0,
    "name" : "string"
  } ],
  "status" : "string"
}
```

## Finds Pets by status

```
GET /pet/findByStatus
```

## Description

Multiple status values can be provided with comma separated strings

## Parameters

| Type  | Name                             | Description   | Schema   |
|-------|----------------------------------|---|--|
| Query | <b>status</b><br><i>required</i> | Status values that need to be considered for filter | < enum (available, pending, sold) > array(multi) |

## Responses

| HTTP Code | Description          | Schema                        |
|-----------|----------------------|-------------------------------|
| 200       | successful operation | < <a href="#">Pet</a> > array |
| 400       | Invalid status value | No Content                    |

## Produces

- [application/xml](#)
- [application/json](#)

## Tags

## Security

| Type   | Name                          | Scopes               |
|--------|-------------------------------|----------------------|
| oauth2 | <a href="#">petstore_auth</a> | write:pets,read:pets |

## Example HTTP request

### Request path

```
/pet/findByStatus
```

### Request query

```
{
  "status" : "string"
}
```

## Example HTTP response

### Response 200

```
[ {
  "id" : 0,
  "category" : {
    "id" : 0,
    "name" : "string"
  },
  "name" : "doggie",
  "photoUrls" : [ "string" ],
  "tags" : [ {
    "id" : 0,
    "name" : "string"
  } ],
  "status" : "string"
} ]
```

## Finds Pets by tags

GET /pet/findByTags

**CAUTION** operation.deprecated

### Description

Multiple tags can be provided with comma separated strings. Use tag1, tag2, tag3 for testing.

### Parameters

| Type  | Name                           | Description       | Schema                     |
|-------|--------------------------------|-------------------|----------------------------|
| Query | <b>tags</b><br><i>required</i> | Tags to filter by | < string ><br>array(multi) |

### Responses

| HTTP Code | Description          | Schema                        |
|-----------|----------------------|-------------------------------|
| 200       | successful operation | < <a href="#">Pet</a> > array |
| 400       | Invalid tag value    | No Content                    |

### Produces

- [application/xml](#)

| apiKey | <code>api_key</code> |

## Example HTTP request

### Request path

```
/store/inventory
```

## Example HTTP response

### Response 200

```
"object"
```

## Place an order for a pet

```
POST /store/order
```

## Parameters

| Type | Name                           | Description                         | Schema                |
|------|--------------------------------|-------------------------------------|-----------------------|
| Body | <b>body</b><br><i>required</i> | order placed for purchasing the pet | <a href="#">Order</a> |

## Responses

| HTTP Code | Description          | Schema                |
|-----------|----------------------|-----------------------|
| 200       | successful operation | <a href="#">Order</a> |
| 400       | Invalid Order        | No Content            |

## Produces

- `application/xml`
- `application/json`

## Tags

- store

## Example HTTP request

### Request path

```
/store/order
```

### Request body

```
{
  "id" : 0,
  "petId" : 0,
  "quantity" : 0,
  "shipDate" : "string",
  "status" : "string",
  "complete" : true
}
```

## Example HTTP response

### Response 200

```
{
  "id" : 0,
  "petId" : 0,
  "quantity" : 0,
  "shipDate" : "string",
  "status" : "string",
  "complete" : true
}
```

## Find purchase order by ID

GET /store/order/{orderId}

### Description

For valid response try integer IDs with value  $\geq 1$  and  $\leq 10$ . Other values will generated exceptions

### Parameters

| Type | Name                              | Description                        | Schema          |
|------|-----------------------------------|------------------------------------|-----------------|
| Path | <b>orderId</b><br><i>required</i> | ID of pet that needs to be fetched | integer (int64) |

### Responses

| HTTP Code | Description          | Schema                |
|-----------|----------------------|-----------------------|
| 200       | successful operation | <a href="#">Order</a> |
| 400       | Invalid ID supplied  | No Content            |
| 404       | Order not found      | No Content            |

### Produces

- `application/xml`
- `application/json`

### Tags

- store

### Example HTTP request

## Request path

```
/store/order/0
```

## Example HTTP response

### Response 200

```
{
  "id" : 0,
  "petId" : 0,
  "quantity" : 0,
  "shipDate" : "string",
  "status" : "string",
  "complete" : true
}
```

## Delete purchase order by ID

```
DELETE /store/order/{orderId}
```

## Description

For valid response try integer IDs with positive integer value. Negative or non-integer values will generate API errors

## Parameters

| Type | Name                              | Description                              | Schema          |
|------|-----------------------------------|--|-----------------|
| Path | <b>orderId</b><br><i>required</i> | ID of the order that needs to be deleted | integer (int64) |

## Responses

| HTTP Code | Description         | Schema     |
|-----------|---------------------|------------|
| 400       | Invalid ID supplied | No Content |
| 404       | Order not found     | No Content |

## Produces

  "phone" : "string",
  "userStatus" : 0
}
```

## Updated user

```
PUT /user/{username}
```

### Description

This can only be done by the logged in user.

### Parameters

| Type | Name                               | Description                  | Schema               |
|------|------------------------------------|------------------------------|----------------------|
| Path | <b>username</b><br><i>required</i> | name that need to be updated | string               |
| Body | <b>body</b><br><i>required</i>     | Updated user object          | <a href="#">User</a> |

### Responses

| HTTP Code | Description           | Schema     |
|-----------|-----------------------|------------|
| 400       | Invalid user supplied | No Content |
| 404       | User not found        | No Content |

### Produces

- `application/xml`
- `application/json`

## Tags

- user

## Example HTTP request

### Request path

```
/user/string
```

### Request body

```
{
  "id" : 0,
  "username" : "string",
  "firstName" : "string",
  "lastName" : "string",
  "email" : "string",
  "password" : "string",
  "phone" : "string",
  "userStatus" : 0
}
```

## Delete user

```
DELETE /user/{username}
```

## Description

This can only be done by the logged in user.

## Parameters

| Type | Name                               | Description                       | Schema |
|------|------------------------------------|-----------------------------------|--------|
| Path | <b>username</b><br><i>required</i> | The name that needs to be deleted | string |

## Responses

| HTTP Code | Description               | Schema     |
|-----------|---------------------------|------------|
| 400       | Invalid username supplied | No Content |
| 404       | User not found            | No Content |

## Produces

- `application/xml`
- `application/json`

## Tags

- user

## Example HTTP request

### Request path

```
/user/string
```
